

Upgrade to OpenServer 6 Definitive

OpenServer operating systems are the backbone for thousands of companies that trust them for business applications.

Always-on performance

As a UNIX-based system, OpenServer 6 Definitive keeps your business up and running 24x7 so you can focus on business growth.

Key features

- **Multi-core processing.** Complete multiple tasks using one integrated circuit or chip.
- **Fibre channel-based SAN support.** Support HP MSA 1000 systems and QLogic Fibre Channel 22xx/23xx controllers.
- **VXFS file system.** Ensure data integrity during a hardware failure with a journaled VXFS file.
- **Support for UnixWare® 7 Definitive applications.** Support UnixWare applications with embedded SVR5 kernel technology.
- **Multi-threaded kernel.** Support more applications with SVR5 technology.
- **Large file support.** Get one terabyte of data to run your applications.
- **Multi-processor support.** Support four to 32 processors. SVR5 is a hardened kernel that runs on low cost, industry standard servers and is capable of near-linear scaling as resources are added to the system.
- **Increased memory support.** With 64 GB of memory, you can support your applications and hardware (upto 32GB general purpose memory and above 32GB to be used for dynamically shared memory).
- **Support for Async I/O.** Asynchronous input/output lets a single application thread overlap disk read/write operations with other processing to allow work to be done with input/output in the background.

Native application platforms

OpenServer 6 Definitive bundles a variety of ready-made applications platforms with the UNIX SVR5 kernel.

Virtualization

OpenServer 6 Definitive is optimized to run in a virtualized VMware environment and lets you have a Virtual Machine launched and configured within an hour. In addition to energy savings and lower capital expenditures, virtualization provides higher resource availability, better desktop management, increased security, and improved disaster recovery.

Support

OpenServer 6 Definitive is available with flexible break/fix support tailored to your unique business requirements. Additional services such as 24x7 support and one hour response time are also available with our support bundles.

Professional Services

Our industry-leading consultants combine professionalism, creativity, and attention to detail to help you with server migrations, deployments, and replication.
